What are RSS feeds?

RSS feeds allow you to see when your favorite websites have posted new content. Once you have subscribed to a feed using a feed reader, summaries of new information will be brought to you as soon as it's published on the website you subscribe to via a feed.

How to use RSS feeds?

To subscribe to RSS feeds you need a feed reader (also known as news reader or aggregator). This is basically a Web application that checks the feeds you have subscribed to and informs you whenever new information has been added. Different feed readers are available, many for free. Some are applications that you download and install. Others are web-based and work inside your browser.

How to subscribe to NB Forest feeds ?

Once you have got a feed reader (program or latest browser version) you just have to decide which content you wish to subscribe to by clicking on the orange button next to the feed of your choice. Alternatively you can also copy and paste the URL of the feed of your choice into your feed reader.

This service is completely free and you can unsubscribe easily by deleting the subscription in your feed reader.
